1. INTRODUCTION

1.1 What is DSTerminal?

DSTerminal Cyber-Ops Platform is an AI-powered, unified cybersecurity operations terminal that integrates over 15 security disciplines into a single, cohesive command-line interface. It serves as a comprehensive security operations center (SOC) in a terminal, combining threat intelligence, vulnerability assessment, incident response, network security, cryptography, forensics, and educational tools.

1.2 Key Capabilities

■ Threat Intelligence	Real-time IOC feeds, VirusTotal integration, APT tracking
■ Vulnerability Assessment	Exploit checking, CVE scanning, web security testing
■ Encryption & Cryptography	AES/256-GCM, QR key sharing, quantum-resistant keys
■ Network Security	Port scanning, WiFi auditing, traffic analysis
■ Incident Response	Ransomware monitoring, file integrity, forensic analysis
■ Financial Forensics	Money laundering detection, fraud investigation
■ Security Education	SQL Injection Learning Lab, interactive training

1.3 Who Is DSTERminal For?

SOC Analysts	Real-time monitoring, threat hunting, incident response
Penetration Testers	Reconnaissance, exploitation, reporting
Security Engineers	System hardening, compliance auditing
IT Professionals	Network security, vulnerability management
Students	Learning cybersecurity through hands-on labs
Organizations	Comprehensive security operations

1.4 AI-Powered Features

■ AI Scoring	Risk assessment with machine learning
■ Smart Command Suggestions	Task completion with context awareness
■ Predictive Analytics	Anomaly detection and threat prediction
■ Intelligent Reconnaissance	Automated asset discovery
■ Zero-Day Intelligence	Real-time CVE monitoring

2. SYSTEM REQUIREMENTS

2.1 Windows

Component	Minimum	Recommended
OS	Windows 10 (64-bit)	Windows 11 (64-bit)
CPU	Intel i5 / AMD Ryzen 5	Intel i7 / AMD Ryzen 7
RAM	8 GB	16 GB+
Disk	2 GB free	5 GB free
Network	Internet connection	High-speed internet
Permissions	Administrator	Administrator

Windows Dependencies:

- Windows 10/11 (64-bit)
- PowerShell 5.0+
- .NET Framework 4.7.2+
- Web browser (for SQL Lab)

2.2 Linux

Component	Minimum	Recommended
OS	Ubuntu 20.04+ / Debian 11+	Ubuntu 22.04+
CPU	Intel i5 / AMD Ryzen 5	Intel i7 / AMD Ryzen 7
RAM	4 GB	8 GB+
Disk	2 GB free	5 GB free
Network	Internet connection	High-speed internet
Permissions	Sudo access	Sudo access

Linux Dependencies:

- Python 3.8+
- pip3
- nmap
- openssl

- curl/wget
- Web browser

Install Dependencies (Linux):

```
sudo apt update
```

```
sudo apt install -y python3 python3-pip nmap openssl curl wget
```

```
pip3 install --user python-nmap pyopenssl cryptography requests beautifulsoup4
```

3. INSTALLATION & FIRST LAUNCH

3.1 Windows Installation

Step 1: Download

1. Visit the official DSTerminal download portal
2. Download the latest Windows installer (DSTerminal_Setup.exe)

Step 2: Install

1. Double-click DSTerminal_Setup.exe
2. Accept the license agreement
3. Choose installation directory (default: C:\Program Files\DSTerminal)
4. Select components (recommended: Full Installation)
5. Click 'Install'
6. Wait for installation to complete
7. Click 'Finish'

Step 3: First Launch (Windows)

Option A: Desktop Shortcut (Recommended)

1. Double-click the DSTerminal icon on your desktop
2. If prompted by User Account Control (UAC), click 'Yes'

Option B: Start Menu

1. Click Start Menu
2. Search for 'DSTerminal'
3. Click the app icon

Option C: Run as Administrator

1. Right-click the DSTerminal icon
2. Select 'Run as administrator'
3. Click 'Yes' on the UAC prompt

Initial Startup Sequence

Journal Pre-proof

3.2 Linux Installation

Step 1: Download

```
wget https://dsterminal.com/downloads/dsterminal-linux-amd64.deb
```

Step 2: Install

Debian/Ubuntu (.deb)

```
sudo dpkg -i dsterminal-linux-amd64.deb  
sudo apt-get install -f # Fix dependencies
```

RHEL/CentOS/Fedora (.rpm)

```
sudo rpm -ivh dsterminal-linux-amd64.rpm
```

Universal (AppImage)

```
chmod +x dsterminal.AppImage  
./dsterminal.AppImage
```

Step 3: First Launch (Linux)

```
# Run DSTERMINAL  
dsterminal  
# Or run with sudo for full features  
sudo dsterminal
```

4.2 Stage 2: Multi-Color Dashboard

Metrics Panel (Left)

METRICS PANEL

Alerts/h: 247

Incidents: 12

MTTR: 4.2m

Uptime: 99.97%

Risk Score: 76/100

Intelligence Panel (Right)

INTELLIGENCE

New IOCs: 47

Campaign: APT29

TTPs Updated

Zero-day: CVE-2024

Patch: 83%

Status Bar

Defensive Security Terminal v3.1.113 | Windows 10

Developer: Spark Wilson Spink | © 2024 | Powered by Stark Expo Tech Exchange

Type 'help' for available commands:

CLI Mode: ADMIN

4.3 Stage 3: System Ready

Ready State Indicators

[14:24:08] DESKTOP-UT7D76J [PROD] NORMAL [SESSION-856B6]

OP-21C2BF @ soc-terminal : ~\$

What the Prompt Means

[14:24:08]	Current time
-------------------	--------------

DESKTOP-UT7D76J	Hostname
[PROD]	Production environment
NORMAL	System status
[SESSION-856B6]	Unique session ID
■	Operator indicator
OP-21C2BF	Operator ID
@ soc-terminal	SOC terminal context
:~\$	Ready for input

5. UNDERSTANDING THE INTERFACE

5.1 Command Prompt Structure

```
[Timestamp] HOSTNAME [ENVIRONMENT] STATUS [SESSION-ID]
■ OPERATOR @ soc-terminal : ~$ [COMMAND]
```

Example:

```
[15:47:17] DESKTOP-UT7D76J [PROD] NORMAL [SESSION-F339E]
■ OP-285A78 @ soc-terminal : ~$ help
```

5.2 Command Categories

Core Commands

help	Show all available commands
clear	Clear terminal screen
exit	Exit DSTerminal
system status	Show system health

Tab Completion

DSTerminal supports Tab Completion for all commands:

- 1. Start typing a command
- 2. Press TAB for suggestions
- 3. Auto-completes command names
- 4. Shows available parameters

Example:

```
Type: syste[TAB]
Suggests: system, system scan, system status, system list...
```

5.3 Module Dashboard

SOC Terminal Dashboard

6. GETTING HELP

6.1 Help Command

The most important command for new users:

```
help
```

Help Output Sections

CORE SECURITY

system scan -All System threat scan

system System security management

system help Show system command help

system scan Run system security scan

system status Show system scan status

net -n mon Live network monitoring

exploitcheck Check for critical CVEs

vtscan VirusTotal file analysis

NETWORK TOOLS

nmap Basic port scan

nmap -sV Service/version detection

nmap -A Aggressive OS and service

portsweep [IP] Scan target for open ports

traceroute [IP] Network path analysis

6.2 Help by Category

help core	Core security commands
help network	Network tools
help crypto	Encryption commands
help forensics	Forensics tools
help web	Web security
help system	System management

6.3 Command Reference Cards

Essential First Commands

help	Shows all commands
system status	Shows system health
scan-quick	Quick security scan
dst-version	Shows version info
clear	Clears terminal
exit	Exits DSTerminal

Pro Tips

- Use Tab for command completion
- Combine commands with '&&'
- Check /var/log/dstterminal for logs
- Access web interface at <https://www.dstterminal.com>

7. MODULE GUIDE

7.1 Complete Module List

1	VirusTotal	vt-scan	Threat intelligence
2	SQL Injection	sqlab / sqlmap	SQL injection testing
3	Network Security	nmap / net	Port scanning, network analysis
4	System Hardening	harden	System security configuration
5	Cryptography	encrypt / decrypt	File encryption/decryption
6	Web Security	websec	Web application testing
7	Forensics	forensics	Digital forensics
8	Reconnaissance	recon	Intelligence gathering
9	Metasploit	msfconsole	Exploitation framework
10	Ransomware Monitor	rmon	Ransomware detection
11	WiFi Audit	wifi-audit	Wireless security
12	MAC Spoofing	macspooof	Privacy/anonymity
13	Exploit Check	exploitcheck	Vulnerability assessment
14	Financial Forensics	dst-investigate	Fraud investigation
15	Certificate Check	certcheck	SSL/TLS auditing

7.2 VirusTotal (vt-scan)

Command: vt-scan

Dashboard:

■ ■ OPERATION SELECTION ■

■ 1. Hash Lookup (VT Intelligence) ■

■ 2. File Scan (Upload & Analyze) ■

■ 3. Bulk Scan Folder ■

■ 4. Check Previous Scan ■

■ 5. View Quarantine ■

■ 0. Exit & Shutdown ■

Examples:

```
# Hash lookup for suspicious file
vt-scan --hash d41d8cd98f00b204e9800998ecf8427e

# Scan a suspicious executable
vt-scan --file C:\Users\stark\Downloads\suspicious.exe
```

Command: sqllab

Basic Authentication Bypass

```
Username: ' OR '1'='1' --
```

Password: anything

Union-Based Extraction

```
' UNION SELECT username, password FROM users --
```

8. COMMON WORKFLOWS

8.1 Security Assessment Workflow

Step 1: Reconnaissance

```
# Quick system assessment
dst-recon
# Select option 1
# Or full recon
dst-recon-full
```

Step 2: Vulnerability Scan

```
# Local exploit check
exploitcheck
# Select option 1
# Web security scan
websec
# Select option 1
```

Step 3: Hardening

```
# Apply hardening
harden-cinematic
# Select all modules
Selection: all
# Execute hardening
■■[ SELECT OPTION ]■■
■■>> 3
```

Step 4: Monitoring

```
# Start real-time monitoring
rmon start
# Generate report
rmon export pdf
```

8.2 Incident Response Workflow

Detection

```
# Check for ransomware indicators
rmon-scan
# Review alerts
rmon events
```

Investigation

```
# Launch financial forensics
dst-investigate
# Check certificate status
certcheck
```

Containment & Recovery

```
# Apply hardening
harden-cinematic
# Generate incident report
rmon export pdf
```

8.3 Penetration Testing Workflow

Phase 1: Reconnaissance

```
# Full recon on target
dst-recon-full
# Network mapping
nmap -A target.com
```

Phase 2: Scanning & Enumeration

```
# Vulnerability scan
exploitcheck --target target.com
# Web application testing
websec
```

Phase 3: Exploitation

```
# Launch Metasploit
msfconsole
```

Phase 4: Reporting

```
# Generate comprehensive report
# Use export options from each module
```

9. REPORT GENERATION

9.1 Report Types

JSON	--json	Data import/export, automation
PDF	--pdf	Documentation, compliance
HTML	--html	Web viewing, sharing

9.2 Report Location

Windows:

C:\Users\[USERNAME]\dsterminal_workspace\reports\

Linux:

/home/[USERNAME]/dsterminal_workspace/reports/

File Naming Convention:

[module]_report_[YYYYMMDD]_[HHMMSS].format

Example:

ransomware_report_20260722_154453.pdf

hardening_20260722_142115.pdf

10. BEST PRACTICES

10.1 Security Best Practices

Before Using DSTerminal

■ Get Authorization	Always have written permission
■ Document Activities	Keep audit trails
■ Use Proper Credentials	Run as admin/sudo when needed
■ Secure Your Workspace	Protect report files
■ Regular Updates	Keep DSTERminal updated

During Usage

■ Start with Help	Learn before using
■ Use Tab Completion	Faster, fewer errors
■ Monitor Resource Usage	Watch CPU/RAM
■ Generate Reports	Document findings
■ Verify Results	Double-check critical findings

After Usage

■ Logout Properly	Use exit command
■ Secure Reports	Encrypt sensitive reports
■ Share Findings	Report to security team
■ Update Knowledge	Learn from findings

11. TROUBLESHOOTING

11.1 Common Issues

Issue: DSTerminal Won't Start

Windows:

- Run as Administrator
- Check antivirus
- Reinstall

Linux:

- Check permissions: `chmod +x dsterminal`
- Check dependencies
- Run with `sudo`

Issue: Feature Not Working

- No Network Scan: Install nmap, check internet, check firewall
- Encryption Fails: Check permissions, generate new key, check disk space
- Ransomware Monitor Fails: Run as admin, check workspace path, restart service

11.2 Log Location

Windows:

```
C:\Users\[USERNAME]\dsterminal_workspace\logs\
```

Linux:

```
/home/[USERNAME]/dsterminal_workspace/logs/
```

Log File Format:

```
dsterminal_YYYYMMDD.log
```

```
Example: dsterminal_20260722.log
```

11.3 Support Resources

- Help Command: `help` in terminal
- Built-in Manual: Command reference
- Online Docs: <https://www.dsterminal.com/docs>
- Email: support@dsterminal.com

12. GLOSSARY

12.1 Key Terms

SOC	Security Operations Center
IOC	Indicator of Compromise
TTP	Tactics, Techniques, Procedures
MTTR	Mean Time to Respond
CVE	Common Vulnerabilities and Exposures
AES	Advanced Encryption Standard
GCM	Galois/Counter Mode
LAA	Locally Administered Address
SIP	System Integrity Protection

12.2 Module Glossary

VirusTotal	Threat intelligence platform
SQLMap	SQL injection testing tool
Nmap	Network mapping tool
Metasploit	Exploitation framework
Nikto	Web server scanner
ClamAV	Antivirus engine

13. GETTING STARTED CHECKLIST

First Launch

- Download DSTerminal installer
- Install with default settings
- Launch as Administrator (Windows) / sudo (Linux)
- Wait for all 3 initialization stages
- Type help to view all commands

First Steps

- Try system status to check health
- Try scan-quick for quick system scan
- Explore websec for web security testing
- Test sqlmap for SQL injection learning
- Generate first report

Regular Usage

- Monitor daily with rmon
- Run periodic vulnerability scans
- Keep modules updated
- Generate reports for documentation
- Review findings and apply fixes

14. QUICK REFERENCE CARD

Essential Commands

help	Show all commands
system status	System health
scan-quick	Quick scan
vt-scan	VirusTotal
sqlab	SQL Lab
nmap	Network scan
harden	Hardening
encrypt	Encrypt files
websec	Web security
rmon	Ransomware monitor
wifi-audit	WiFi audit
exploitcheck	Vulnerability check
dst-investigate	Financial forensics
certcheck	SSL audit
exit	Exit DSTerminal

Module Shortcuts

sys	system
scan	system scan
ws	websec
enc	encrypt
rec	recon
rmon	ransomware monitor
