Table of Contents

- 1. PURPOSE & ETHICAL FRAMEWORK
- 2. DATA PRIVACY & SOVEREIGNTY (The Zero-Phone-Home Pledge)
- 3. EXPLAINABILITY & AUDITABILITY (The Glass Box Pledge)
- 4. SECURITY & INTEGRITY (Protecting the Protector)
- 5. MODULARITY & SCOPE (Defined Use Cases)
- 6. LIABILITY & DISCLAIMER
- 7. TRANSPARENCY & ACCOUNTABILITY
- 8. USER ACKNOWLEDGMENT
- 9. SIGNATURE & VERIFICATION
- 10. SOFTWARE BILL OF MATERIALS (SBOM)

1. PURPOSE & ETHICAL FRAMEWORK

Dsterminal is an offline-first, AI-assisted cybersecurity platform designed exclusively for defensive operations (Blue Team), security education, and infrastructure hardening.

Core Ethical Commitments:

- **Legal Use Only:** This platform is strictly prohibited for unauthorized network intrusion, exfiltration, or manipulation of data without explicit ownership or consent.
 - **Defensive Mandate:** Every module exists to identify, report, and remediate vulnerabilities within the user's legally owned or authorized environment.
 - **Zero Harm:** Automated actions require explicit user confirmation unless explicitly overridden for automated enterprise deployments.
-

2. DATA PRIVACY & SOVEREIGNTY (The Zero-Phone-Home Pledge)

2.1 Absolute Data Locality

All data processed by Dsterminal remains on the local machine. No logs, telemetry, configuration files, or analysis results are transmitted to external servers, cloud platforms, or third-party entities by default.

2.2 Network Behavior

- Core functionality operates fully offline (anomaly detection, system hardening, log analysis, SQLmap labs).
- Internet-Required Modules (SSL/TLS validation, VirusTotal scanning, self-updates) require explicit user consent with a warning prompt.

2.3 No Telemetry or Backdoors

Dsterminal does not contain telemetry agents, analytics trackers, call-home routines, or backdoor mechanisms.

2.4 Data Encryption

All locally stored data is encrypted at rest using AES-256 with a user-provided passphrase. If no passphrase is provided, data uses OS-level file permissions.

3. EXPLAINABILITY & AUDITABILITY (The Glass Box Pledge)

Dsterminal's AI and automated decision-making are not black boxes. Every action is traceable and defensible in a court of law or military tribunal.

3.1 Decision Transparency

Every alert, recommendation, or action includes:

- Plain-English Rationale: What was detected and why it matters.
- Evidence Footprint: Raw log snippets, file hashes, and network packet summaries.
- Mathematical Trace: The exact decision path (Decision Tree, feature importance, or behavioral rule) that led to the conclusion.
- MITRE ATT&CK; Mapping: If applicable, the specific Tactic and Technique.

3.2 Audit Trail

Dsterminal maintains an immutable, append-only audit log recording:

- Timestamp (millisecond precision, timezone-aware)
- Module and sub-command executed
- AI Model version used
- Cryptographic hash (SHA-256) of input data
- Full decision path and confidence score
- Human user who executed the command
- Any human override or manual intervention

4. SECURITY & INTEGRITY (Protecting the Protector)

4.1 Tamper-Proof Installation

The official installer includes a SHA-256 checksum manifest. If any checksum fails, the installation aborts with a tamper warning.

4.2 Update Integrity

Self-updates are signed with a GPG key controlled by the Dsterminal development team. Updates apply only with a valid GPG signature and matching checksum.

4.3 Privilege Escalation

Dsterminal requests the minimum necessary privileges. System hardening and quarantine modules require elevated privileges but notify the user and require confirmation.

4.4 Dependency Vetting

All bundled libraries and binaries are verified for known CVEs during the build process. A Software Bill of Materials (SBOM) in SPDX format is included.

5. MODULARITY & SCOPE (Defined Use Cases)

Dsterminal is a modular platform with the following core modules:

Module	Internet?	Offline Capable
-----	-----	-----
Network Recon	No	Yes
Log Forensics	No	Yes
File Quarantine	Optional VT	Yes
SSL/TLS Inspector	Yes	Partial
System Hardening	No	Yes
SQLmap Learning Lab	No	Yes
AI Advisor	No	Yes
Report Engine	No	Yes
Self-Update	Yes	File-based
Compliance Scanner	No	Yes
Threat Intelligence	Optional	Yes (bundled)

Each module can be independently enabled/disabled via:

dsterminal module --enable --disable

6. LIABILITY & DISCLAIMER

6.1 Defensive Use Only

Dsterminal is provided as is for defensive and educational purposes. Users are solely responsible for ensuring they have proper authorization to scan, test, or harden any system.

6.2 No Warranty

The platform is provided without warranty of any kind. While we strive for accuracy and security, no system is infallible.

6.3 Compliance

Users are responsible for ensuring their use of Dsterminal complies with local, national, and international laws, including but not limited to:

- Computer Fraud and Abuse Act (CFAA - US)
- General Data Protection Regulation (GDPR - EU)

- Defense Trade Controls (ITAR - US)
 - Military and government-specific cybersecurity policies
-

7. TRANSPARENCY & ACCOUNTABILITY

7.1 Open Communication

The Dsterminal development team is committed to transparency. Users may request:

- Source code access (under NDA for proprietary modules)
- Full model training data (sanitized and anonymized)
- Penetration test results from independent third-party audits

7.2 Reporting Vulnerabilities

Report vulnerabilities responsibly to: security@dsterminal.dev

We guarantee:

- Response within 72 hours
- Acknowledgment within 24 hours
- Fix within 30 days (or waiver accepted)

7.3 Continuous Improvement

Dsterminal evolves with the threat landscape. We will never compromise privacy, offline capability, or explainability for convenience.

8. USER ACKNOWLEDGMENT

By installing, executing, or updating Dsterminal, the user acknowledges that they have read, understood, and agreed to this manifest in its entirety.

The user confirms that:

- They have the legal authority to analyze, scan, and harden the systems on which Dsterminal is used.
 - They will use the platform solely for defensive, educational, or authorized operational purposes.
 - They accept that Dsterminal provides guidance, not guarantees, and the ultimate responsibility for security decisions rests with the user.
-

9. SIGNATURE & VERIFICATION

This manifest is digitally signed using the Dsternal GPG Key
(Key ID: 0xA4F5C123D7E8F9AB) and is valid for version 3.1.113.

Verification Methods:

1. GPG Signature Verification:

gpg --verify Dsternal_Manifest_v3.1.113.pdf.sig Dsternal_Manifest_v3.1.113.pdf

2. SHA-256 Checksum:

sha256sum Dsternal_Manifest_v3.1.113.pdf

3. QR Code Verification:

Scan the QR code included in this document to verify on our website

4. SPDX SBOM Verification:

The SPDX bill of materials is included as Dsternal_SPDX_v3.1.113.json

Version: 3.1.113

10. SOFTWARE BILL OF MATERIALS (SBOM)

Dsternal provides a comprehensive Software Bill of Materials (SBOM) in SPDX format to ensure transparency and compliance with cybersecurity standards including:

- Executive Order 14028 (US)
- NIST SP 800-218 (SSDF)
- CISA requirements for software supply chain security

The SBOM includes:

- All direct and transitive dependencies
- Version information for each component
- License information
- Supplier information
- Known vulnerabilities (when available)

SPDX File: Dsternal_SPDX_v3.1.113.json

SPDX Version: SPDX-2.3

Document Namespace: <https://dsterminal.dev/spdx/Dsterminal-3.1.113>

The SBOM can be verified using SPDX-compliant tools:

- `spdx-sbom-generator --file Dsterminal_SPDX_v3.1.113.json --verify`
- `spdx-tools --validate Dsterminal_SPDX_v3.1.113.json`

Key Dependencies:

Component	Version	License
-----	-----	-----
Python	3.x	PSF-2.0
reportlab	5.0.0	BSD-3-Clause
Pillow	12.3.0	HPND
qrcode	8.0	BSD-3-Clause
Dsterminal Platform	3.1.113	Proprietary

For a complete list, refer to the SPDX JSON file or run:

`dsterminal sbom --export=spdx`

About This Document

This manifest serves as the official documentation for Dsterminal's commitment to privacy, security, and ethical use. It is legally binding and subject to the terms and conditions outlined herein.
